

Electronic billing

Sycor is your partner for electronic billing of telecommunications costs.

Your company spends a huge amount of money on billing telecommunications costs. With our state-of-the-art electronic billing systems, we are the ideal partner for you: simply outsource your billing and support to us and save valuable time and money.

Each month, you have to process bills for your landlines, cellular lines and data communications. This involves postal receipt of bills, internal distribution, auditing, in-house mail, posting, cost center controlling and archiving. It can easily take up to 15 to 20 minutes to process each bill. The personnel capacities and costs involved in these tasks are enormous.

With our state-of-the-art electronic billing system, we are the ideal partner for telecommunications billing. By outsourcing your entire business process, you will save time and

lower your costs significantly. We standardize your billing formats and bundle all incoming bills from different telecommunications providers for landlines, cellular lines and Internet services. Depending on your specific requirements, we itemize these bills (e.g., by cost centers and phone lines). With our custom interfaces, you can import your bills directly into business applications such as SAP ERP. We can also send you bills and detailed call lists as PDF documents or electronic files in standard formats. You receive a hard copy of the summarized bill. Preparing for electronic billing is very straightforward. We provide you with an Excel file that you complete. We require the following information: bill recipient, locations (landline), FKTO (ID) and phone number or cell phone card number, customer account, customer number, cost center, G/L account, user and department. Based on this information, we design your custom billing model.

>>>

Your advantages:

- Significant internal time and cost savings
- Clearly calculable costs
- Rapid access to data in your ERP system
- Bills and call lists are easy to read and send thanks to PDF format
- 24/7 expert know-how

Your challenges:

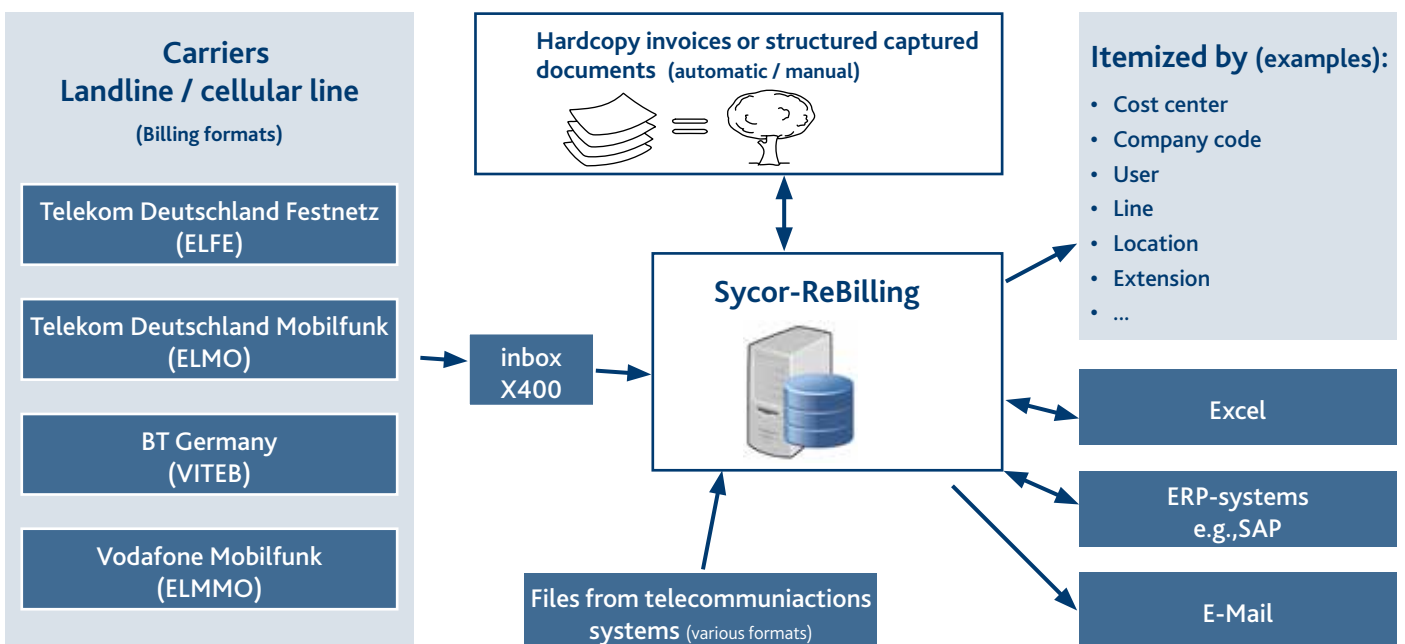

- Bills received from different telecommunications service providers
- Time-consuming, costly auditing, posting and archiving of bills
- Data not available in your ERP system
- Lack of human resources

As medium-sized group of companies, we always focus on our customers' special requirements for billing landlines, cellular lines and data communications and keep an eye on their scheduling, organizational and budget frameworks.

Alternatively, we can offer you standardized, cost center-related billing in your SAP system, not including expenses and travel costs. Any

changes and modifications are charged based on an hourly consulting rate.

Additional to electronic billing we offer individual support in the area of landline and cellular line telephony.

For detailed information or an individual offer don't hesitate to contact our contact person.
